ABSTRACT

To study existing school-supervised work education programs, to describe different organizational patterns, to identify constraints on program expansion, and to examine incentives to increase employer participation, representative programs were suggested upon request by Chief State School Officers, Directors of Secondary Vocational Education, Directors of Community Colleges, and other consultants of national repute. The directors of each of the more than 1000 programs named was sent a questionnaire requesting information on schools in which the program operates, educational level of the program, primary purpose of the program, inclusion of job-related instruction, industrial setting, presence of students under age 16, availability of academic credit for time spent at the job site, and related topics. Name, address, and phone number of the project director are included for the 550 questionnaires which met the study requirements. A report "A Topical Bibliography of Work Education Programs, Projects, and Procedures" by Trudy Banta and others preceeded this directory. A final report in the form of 50 case studies is to be published. (AG)

BACKGROUND OF STUDY

In June of 1972, the Office of Planning, Budgeting, and Evaluation (OPBE) in the U.S. Office of Education let a contract to System Development Corporation (SDC) of Santa Monica, California, to study existing school-supervised work education programs to describe different organizational patterns, to identify constraints on program expansion and to examine incentives to increase employer participation.

As defined by OPBE for this study, school-supervised work education programs are those in which students spend part of their time working in paying jobs, which are usually reserved by the employer for students from that particular school or district. Often these programs involve students being released from school for a specified portion of time to work at their jobs. School-supervised work education programs include cooperative programs in which students perform work related to their vocational training; work-study programs designed to provide vocational students with at least a minimal income; career exploration programs designed to cycle students through a variety of paying jobs; and dropout prevention programs in which a student's school program includes a limited number of hours of paid work and the proviso that he will be allowed to keep his job only if his attendance and conduct in school remain satisfactory. While an exception to the general rule, school-supervised work education is also allowed to include clinical training programs in the health professions in which students work in regular jobs but are not paid in cash for their efforts.

To initiate this study, Chief State School Officers, Directors of Secondary Vocational Education, Directors of Community Colleges, Education Directors of the State Chambers of Commerce, the Presidents and Executive Secretaries of the Advisory Committees for Vocational Education, Superintendents of Education in the Great Cities, and consultants of national repute were asked to recommend programs which they felt were representative of a diversity of work education programs with which they were acquainted. Names of more than 1,000 programs were submitted.

Once these program names were received, the director of each program was sent a letter describing the study and was asked to complete a questionnaire to provide information which could be used as a basis for determining the 50 programs around which case studies would be developed. Over 600 questionnaires were returned of which 550 met the requirements of the study (i.e., being in existence for at least 1 year and having a work-for-pay component). With the exception of editing necessary to shorten and clarify comments, correct spelling and grammatical errors, and eliminate value judgements, the information included in this directory is presented exactly as received on the questionnaires. The accuracy of the data has not been verified by either the Office of Education or System Development Corporation. Data from the questionnaires were inserted into a data base and processed by computer.

A complex but objective sampling scheme was used to select 50 programs, with widely varying characteristics, to be visited by project interview teams. The main characteristics considered in this selection process were the educational level of the program (secondary or postsecondary), the purpose of the program (training in specific occupational areas, career exploration, dropout prevention, etc.), and the industrial setting of the program's location (farming region, bedroom community, single industry, major industrial/business center). Interview teams were sent to each site to interview project personnel, participating and nonparticipating students, participating and nonparticipating employers and union personnel where they were involved in the running of programs. This information will be used to document the growth, training strategies, and significant characteristics of the 50 different work education programs as well as to look for commonalities in features among the more successful of the 50 programs that can lead to recommendations about the structure of future work education programs. The case studies will be written so as to bring out both successful and unsuccessful features and to highlight strategies which appear to be linked to desirable outcomes and that are readily exportable. Any product resulting from this study will be subject to Office of Education review and final validation by the Division of Education's Dissemination Review Panel.

In September 1973, the project team will produce a Final Report containing the case studies, an analysis of the data, a handbook containing a detailed description of the methodology, and an executive summary of the entire report. However, so that educational researchers and other professionals concerned with career and vocational education can make use of some of the project's findings while the information is still very current, it was decided to publish two preliminary reports for immediate use by persons in the field.

The first of these reports is titled *A Topical Bibliography of Work Education Programs, Projects and Procedures*, by Trudy Banta, Steven Frankel, Sylva Bowlby, and Cleone Geddes. This document resulted from the bibliographic search activity which preceded the identification of eligible programs and the questionnaire development activity. It contains more than 1,000 bibliographic citations related to career and work education. The report is published by System Development Corporation (Santa Monica, California) as Technical Memorandum TM-5086/000/00 and will be available through ERIC on microfiche.

This volume is the second of the two reports. When used in conjunction with its indexes and its table of contents, it should prove a valuable resource in identifying programs with particular features, and in developing a better understanding of the wide breadth of program configurations operating in the work education field.

With more than 20,000 work education programs currently underway in the United States, there is no question that many programs (perhaps some of very high quality) have not been included simply because none of the persons from whom submissions were requested saw fit to mention them. Similarly, it is equally probable that at least a few of the included programs are being conducted differently than at the time of submission. While neither the U.S. Office of Education nor System Development Corporation can vouch for the quality of the included programs or the accuracy of the provided information, the authors feel that this document will still prove to be a valuable tool to educators involved in work education programs in the United States today.

INSTRUCTIONS TO THE USER

As previously explained, the contents of this directory were supplied by program directors and other respondents to the initial questionnaire, Characteristics of Work Education Programs, after their programs were submitted for inclusion in the study by at least one of the persons contacted by the project team. With the exception of editing necessary to shorten and clarify comments, correct spelling and grammatical errors, and eliminate value judgements, the information included in this directory is presented exactly as received on the questionnaires. Neither the U.S. Office of Education nor System Development Corporation can vouch for the accuracy of the data or the quality of the programs.

The programs included in this directory of work education programs are listed by State. The States appear in alphabetical order as indicated by the Table of Contents. Within each State, the programs are grouped by educational level with all secondary level programs appearing first, postsecondary programs next and programs operating at varied educational levels appearing last.

For each program, a synopsis of its characteristics, as supplied by program personnel, is included. The specific items of information included are as follows:

- School(s) in which the program operates
- Educational level of the program - secondary, postsecondary or varied levels (varied refers to programs operating at more than one level and programs operating below the secondary school level)
- Primary purpose of the program - training students to work in specific occupational areas; familiarizing students with the world of work and/or different occupational areas (career exploration); preventing the student from dropping out of school; or varied purposes of equal importance
- Inclusion of job-related instruction as a component of the program
- Industrial setting in which the program is located (i.e., farming regions, bedroom communities, single industry areas, or major industrial/business centers)
- Presence of students who are under the age of 16 and are working for pay
- Availability of academic credit for the time spent at the job site
- Percentage of students, completing the program during the 1971-72 school year, who were placed in jobs in the occupational field in which they worked while in the program
- Active union participation in the work portion of the program

- Number of students enrolled in the program for the 1972-73 school year, and the percentages who are members of minority groups, female and physically handicapped

- Occupational areas in which the students are working

- Reimbursed expenses paid to employers participating in the program

- Private support - sources of support in addition to the usual sources (parent institution, local taxes and State and Federal Governments).

In cases where certain information was not supplied or was otherwise unavailable or where an item was not applicable to a specific program, it is indicated in the directory.

Program directors were asked to provide a brief summary of any facets of their program which might distinguish it from others. When this was supplied, it was included in the directory under the heading of Additional Comments. These comments were edited to avoid repeating information which could be inferred from other parts of the program listing and to eliminate descriptions of program features which appeared to be common to most work education programs of similar types.

The directory also includes the name, address and phone number of the program director and, when available, the district superintendent or college president. In some instances, the addresses supplied by the respondents were for their residences and are not those of the educational institution.

It should be noted that several schools in the directory are included more than once with different programs being mentioned in each listing. This situation came about when different persons submitted segments of the same program, or different programs from the institutions for inclusion. Since all submissions were accepted on an equal basis, this resulted in more than one listing for the program or school. In other cases, respondents chose to list a program or a school as a single entity without highlighting a particular vocational area.

TABLE OF ACRONYMS AND ABBREVIATIONS

WECEP	Work Experience and Career Exploration Program

The new two-letter State abbreviations are used throughout this directory.

TECHNICAL INFORMATION

In many large-scale evaluation efforts, researchers find themselves in possession of far more information than ever appears in the project's reports. This situation is especially prevalent in cases where a large amount of information on many different programs has been loaded into a computer data base for sampling purposes. Often, after the sample has been selected, information on the nonselected programs is discarded as being of no further use to the project, when it could be of great use to other researchers.

Such could have been the case with this study. In order to select the 50 programs around which detailed case studies were to be constructed, an enormous amount of detailed information was collected on approximately 550 programs which were to be considered for selection. In the contract negotiation phase, it was realized by SDC Project Director, Dr. Steven Frankel, and the USOE Project Officer, Ms. Mary Ann Millsap, that the body of information describing all 550 programs would be useful to many persons not connected with the project. Because of this, one of the tasks defined in the final proposal was to assemble an automated system of "off-the-shelf" software components capable of reproducing a statistical data base in easily readable book form so that the entire set of information could be inexpensively reproduced as a directory.

This directory is a result of that process. The camera-ready copy from which the printing plates were made was generated entirely by computer, and no typist has been associated with this process.

After the sampling process was completed, the program sites which were not selected for the study were not eliminated from the data base as is usually done. Rather, all information was stored on a magnetic disk pack accessed by an IBM 360/91 computer, and was input to a custom-built series of programs which generated a specially edited data base. This was then input to a standard text editing and printing package of computer software.

By developing a series of programs which allowed a fixed field statistical data base to be converted to the accepted input format, SDC was able to generate a proof copy of this directory in a matter of days. The proof copy was then edited and the resulting corrections were made by modifying the original data base while working at a remote computer terminal, and then reprinting the entire directory after all corrections had been made.

Since it is far faster to make changes in a data base than it is to retype entire pages, it was possible for a single researcher, Ms. Emily Allison, to make more than 2,000 changes in the text in a few days. Additionally, printing three camera-ready copies of the entire directory on the computer consumed less than $30 worth of computer time and paper, which is about one-third of the cost of copies reproduced by conventional means.

The authors of this document feel that procedures similar to this could be employed in many different research projects. In addition to being of immediate use to persons not involved in research, but in program operation or policy formation, there are also many potential dollar savings which can be realized by having other research projects "piggyback" on an original project by having identified universes from which other samples can be drawn. Also, by making available copies of the directory to organizations which provided information used in constructing the original data base, it is possible to compensate them in a meaningful manner for the time they spent gathering and organizing the requested information. Indeed, the promise of such a form of information sharing may induce organizations, plagued by requests from many different researchers, to participate in a project with which they might otherwise not have associated.
